REMARKS

This is UNEVALUATED Information

25X1

the items in the workshop were transport cars for V-2 type guided missiles.

Comment. It was repeatedly confirmed that transport cars for guided missiles (large rockets) were manufactured at the "Podvornik" plant.

Transport Car for V-2 Type Guided Missiles

Legend

The transport car consists of a platform with two axles for four bogie wheels.

A tower-like structure of tubes, which can be hinged down on the platform, is fitted on the platform. A semi-circular beam, probably serving as a chock for the missile, is fitted to the upper part of the structure.

The transport cars with their structures were painted either in red or in silver color.
